

Where the exceptional is tradition  
and tradition is exceptional.

# Tutima - Welcome to a new reckoning of time

It is said that Tutima is most at home where mankind defies the elements; in the cockpit of an airplane, navigating the high seas, hugging the fast curves of a road. And it's true: that's where a Tutima feels most at home. That's where it wants to go. For home is not only where we go but also where we come from.

Tutima was established in 1927 and developed the first wristwatch in Glashütte, Germany. Still family owned and operated today, Tutima continues its rich tradition of crafting exceptional instrument watches with their newest collection fully created in Glashütte; the watch mecca of Germany. Each timepiece from the "Made in Glashütte" collection, clearly demonstrates how this family brand is motivated by passion for innovation, values, and a clear conviction to strive for excellence.

### Being Edgy. The New Aesthetic.

The highlight of the Tutima collection, the Saxon One, is a wristwatch full of character – sporty and elegant at the same time; establishing an entirely new style in the world of German watches. For those who don't need GPS to know where they stand.

### Nothing can rattle it.

An evolution of the NATO Chronograph by Tutima developed in 1984 has outstandingly proven itself in global use for decades. Now the M2 made in pure titanium features a soft iron inner case for protection from magnetic fields, and a sapphire crystal, anti-reflective on both sides; arrives destined to continue this success story for professionals in any environment.

—6451-02**

### A Legend, Retold.

In no other timepiece of our current collection is there so much Pilot DNA, which descends from the legendary Tutima pilot's chronograph of 1941. Every Grand Flieger Chronograph bears the engraving "Chronometer" on the case side and is presented with a Certified Chronometer Certificate assuring that the watch meets strict guidelines of accuracy and timing.

### Perfection that you can hear.

The Hommage Minute Repeater was first introduced by Tutima in 2011 and is considered to be one of the most complicated timepieces to manufacture, using 550 individual parts in the movement alone. As a matter of fact, it's the first time a Minute Repeater has been built in Germany. A Minute Repeater allows the wearer to activate a slide on the side of the watch. It indicates the time from the dial and communicates this through musical notes. A masterpiece of melodious skill and winner of the Couture Time Award, this outstanding precision of engineering is available in a limited production of five pieces in platinum worldwide.
